Platforms & Apps That Move Metrics With RemoteState

Scalable, secure digital products delivered on time by Engineers, accelerating global roadmaps with RemoteState.

Agenda

Uncover RemoteState's battle-tested methodology for enterprise application development and discover the transformative strategies we deploy to fast-track your organization's comprehensive digital transformation roadmap.

Learn how our proven approach turns complex business challenges into scalable, innovative solutions that drive competitive advantage and sustainable growth in today's rapidly evolving digital landscape.

A Journey of Innovation

Founded in 2020, RemoteState has grown into a multi-disciplinary studio of seasoned engineers and designers building high-impact software across industries. Expertise includes Go, Node.js, React, Kubernetes, Docker, and adjacent stacks, enabling rapid delivery of resilient platforms with great user experiences.

Your Global software development partner that delivers secure, scalable web, mobile, and cloud solutions - fast, reliable, and focused on measurable impact.

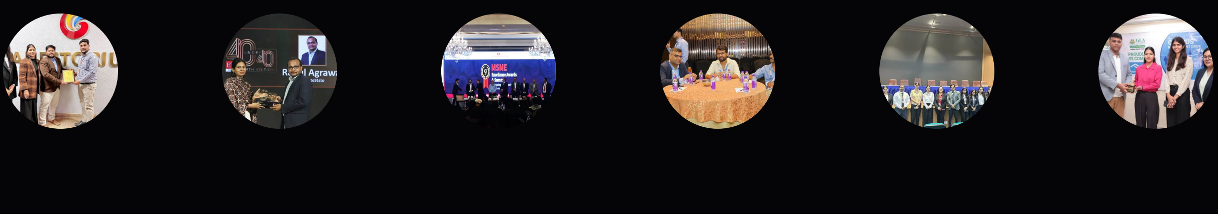
Awards and Recognitions

Explore industry awards, certifications, and the latest press releases showcasing product milestones, partnerships, and thought leadership from RemoteState.

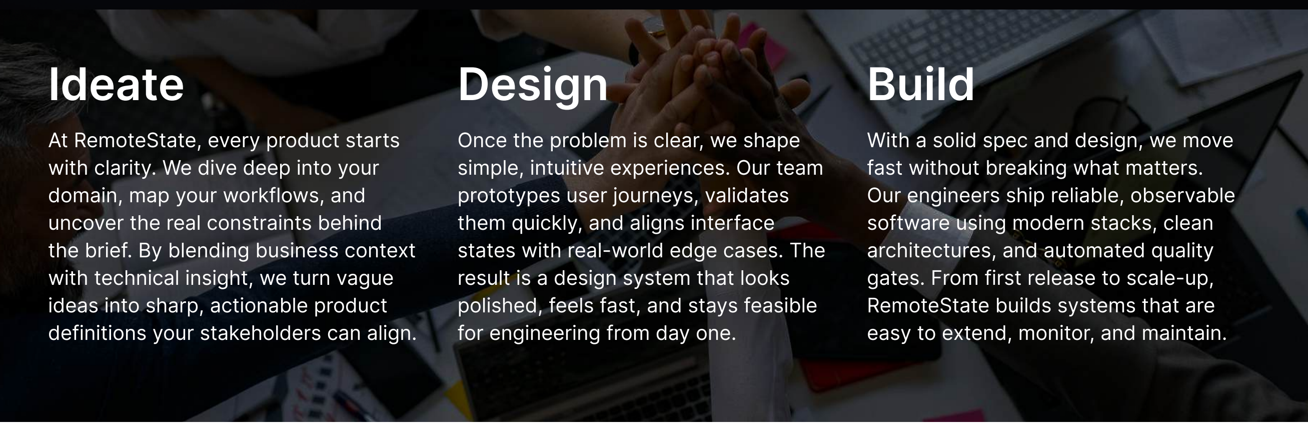


Innovation Squad

A skilled team of developers, architects, and strategists who build solutions that scale, perform, and deliver measurable results.

How We Work

RemoteState is a technology partner focused on turning ambitious ideas into reliable products through modern web, mobile, and cloud engineering. Teams blend product thinking with proven practices to deliver secure, scalable solutions and measurable outcomes for startups and global enterprises.



Ideate

At RemoteState, every product starts with clarity. We dive deep into your domain, map your workflows, and uncover the real constraints behind the brief. By blending business context with technical insight, we turn vague ideas into sharp, actionable product definitions your stakeholders can align.

Design

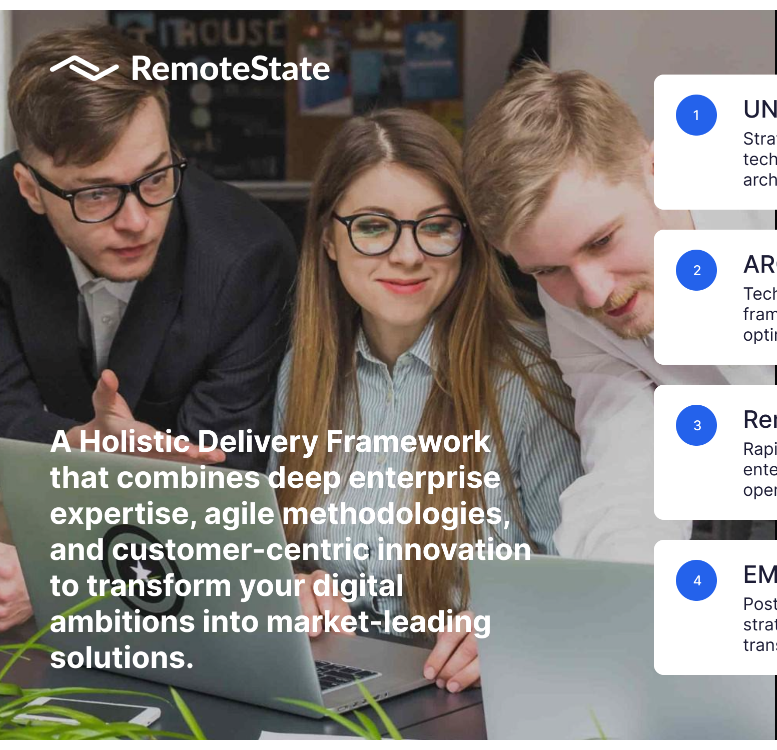
Once the problem is clear, we shape simple, intuitive experiences. Our team prototypes user journeys, validates them quickly, and aligns interface states with real-world edge cases. The result is a design system that looks polished, feels fast, and stays feasible for engineering from day one.

Build

With a solid spec and design, we move fast without breaking what matters. Our engineers ship reliable, observable software using modern stacks, clean architectures, and automated quality gates. From first release to scale-up, RemoteState builds systems that are easy to extend, monitor, and maintain.

A Passionate Leader in Futuristic Solutions Development

From strategic consulting to full-cycle development and support, engagement models are flexible and collaborative - designed to ship faster, scale confidently, and consistently exceed expectations.



A Holistic Delivery Framework that combines deep enterprise expertise, agile methodologies, and customer-centric innovation to transform your digital ambitions into market-leading solutions.

1. UNDERSTAND YOUR VISION
   Strategic consultation, business requirements mapping & technology roadmap planning for sustainable enterprise architecture
2. ARCHITECT THE SOLUTION
   Technical design, system infrastructure & scalable framework creation with security and performance optimization
3. RemoteState's MODEL
   Rapid development cycles, cloud deployment & enterprise-grade integration ensuring seamless operational excellence
4. EMPOWER & EVOLVE
   Post-launch support, continuous optimization & strategic scaling as your business grows and transforms

Phase 1

Explore & Innovate

We empower visionary founders, talented designers, and skilled engineers to build robust, scalable enterprise platforms delivering seamless, exceptional user experiences that drive business growth and innovation.

PRUDENTIAL

Prudential

Prudential partnered with RemoteState to accelerate technology transformation and operational efficiency across its Southeast Asia operations. Facing rapidly evolving insurance regulations and the need to support digital-first initiatives, Prudential required skilled engineering talent to modernize core systems, streamline backend workflows, and maintain platform stability.

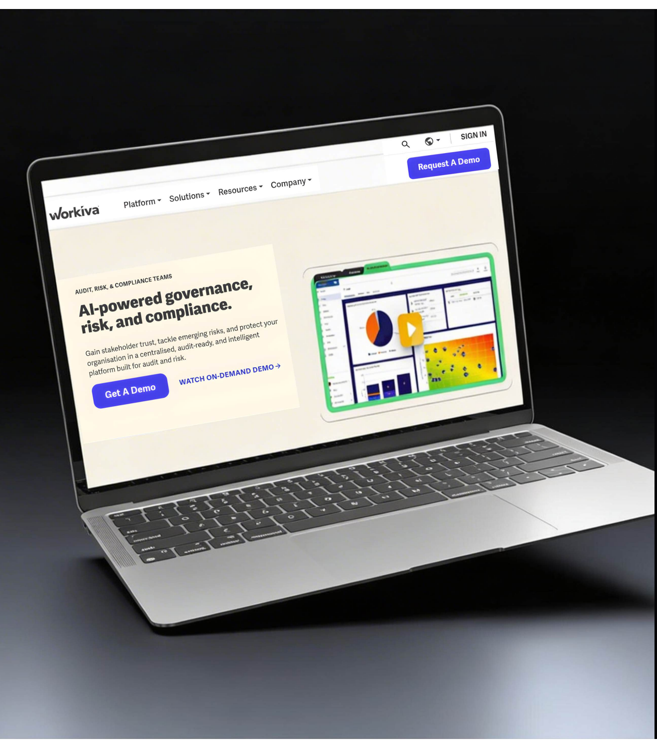
Java flutter NodeJs Golang React

Precium

Precium

Precium set out to revolutionize hotel room pricing by harnessing artificial intelligence and real-time data. The platform's core mission was to provide hotel managers with actionable daily rate recommendations backed by market data, competitive analysis, and local event intelligence.

Postgresql Golang React



workiva

Workiva

Workiva delivers an integrated, cloud-based reporting platform relied upon by the world's largest enterprises to handle financial, risk, and compliance reporting. In this project, RemoteState contributed to a major service migration and API infrastructure overhaul, modernizing the core of Workiva's messaging, scheduling, and notification stacks.

Java Golang React

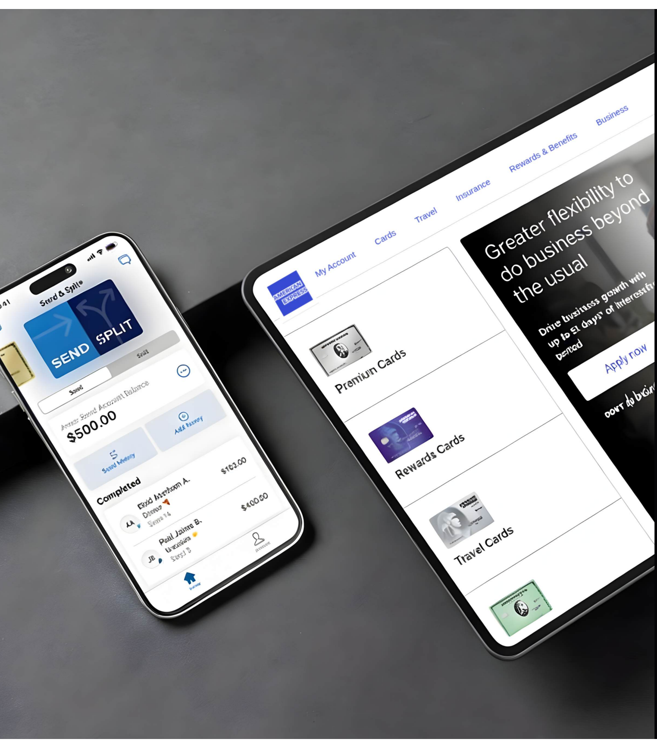
Nvest
Redefining The Insurance Landscape

Nvest

Nvest

Nvest began as a mission-driven initiative to close the financial literacy gap for new and aspiring investors. The platform blends structured learning modules with gamified quizzes and portfolio simulations, helping users build core investment skills at their own pace. Nvest leverages real-time analytics and personalized content delivery to keep learners engaged, using AI to adjust the curriculum to each user's needs and experience.

NodeJs React



AMERICAN EXPRESS

American Express-Reparo

Reparo was developed as a critical enterprise system to help American Express efficiently address and remediate customer account anomalies. When the proprietary Shield engine detects issues affecting points, benefits, or other account entitlements, Reparo provides a single, streamlined UI for both automated and manual investigation.

Kubernetes Postgresql React React Native

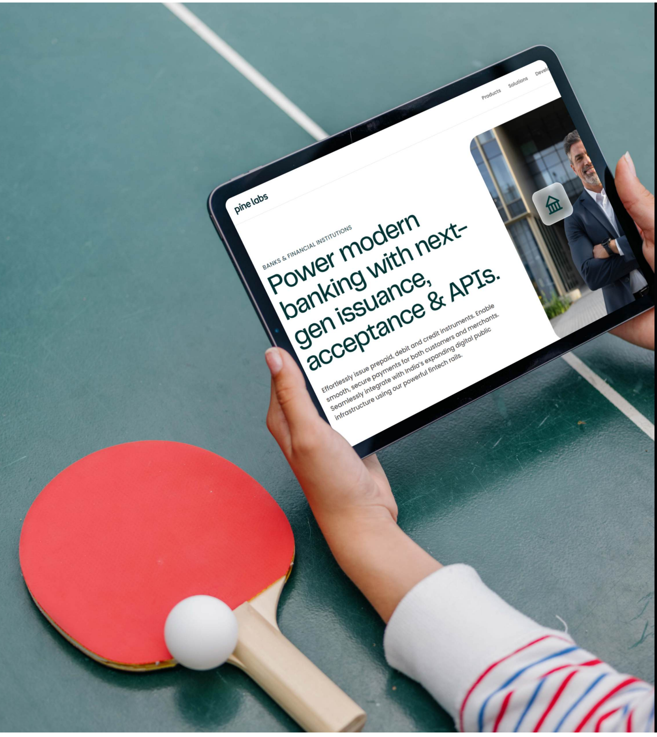
With Kissht, Sapno ko kaho YES!
Backed by registered NBFC

kissht

Kissht

Kissht set a new standard for retail lending by enabling instant EMI offers and approvals at the point of sale in stores across India. The platform digitizes the entire loan journey - from customer eligibility and KYC, to plan selection and automated repayment. Retailers and vendors use the integrated dashboard to initiate loan applications, track status, and manage sales, while customers experience quick, paperless onboarding and live EMI selection.

Java Angular Golang



Power modern banking with next-gen issuance & APIs.

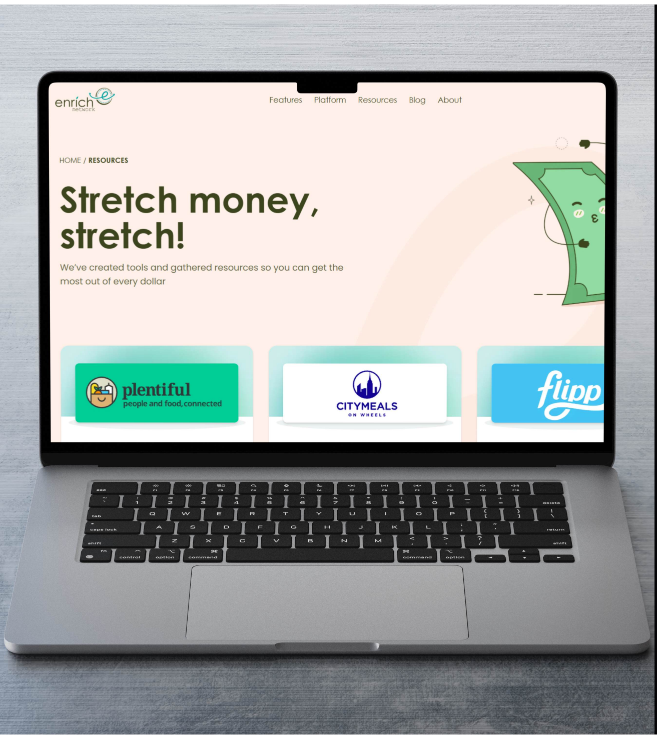
RemoteState

pine labs

Pine Labs

Pine Labs aimed to consolidate and elevate its prepaid, stored value, and rewards ecosystem after acquiring the Qwikcilver platform, building an enterprise-grade prepaid issuing engine that integrates deeply with merchant POS, e-commerce, mobile wallets, and loyalty workflows.The goal was to give brands, retailers, banks, and corporations a unified system to launch, manage, and optimize prepaid programs.

Golang React



Stretch money, stretch!

We've created tools and gathered resources so you can get the most out of every dollar

RemoteState

enrich network

Enrich

Enrich Network was built to help users - especially those relying on government benefits like EBT/SNAP - better understand and maximize their financial resources. Fragmented systems, manual receipt tracking, and complex eligibility rules often cause users to miss out on benefits they're entitled to.
