Platforms & Apps That Move Metrics With RemoteState

Scalable, secure digital products delivered on time by Engineers, accelerating global roadmaps with RemoteState.

RemoteState

Agenda

Uncover RemoteState's battle-tested methodology for enterprise application development and discover the transformative strategies we deploy to fast-track your organization's comprehensive digital transformation roadmap.

Learn how our proven approach turns complex business challenges into scalable, innovative solutions that drive competitive advantage and sustainable growth in today's rapidly evolving digital landscape.

RemoteState

A Journey of Innovation

Founded in 2020, RemoteState has grown into a multi-disciplinary studio of seasoned engineers and designers building high-impact software across industries. Expertise includes Go, Node.js, React, Kubernetes, Docker, and adjacent stacks, enabling rapid delivery of resilient platforms with great user experiences.

Your Global software development partner that delivers secure, scalable web, mobile, and cloud solutions - fast, reliable, and focused on measurable impact.

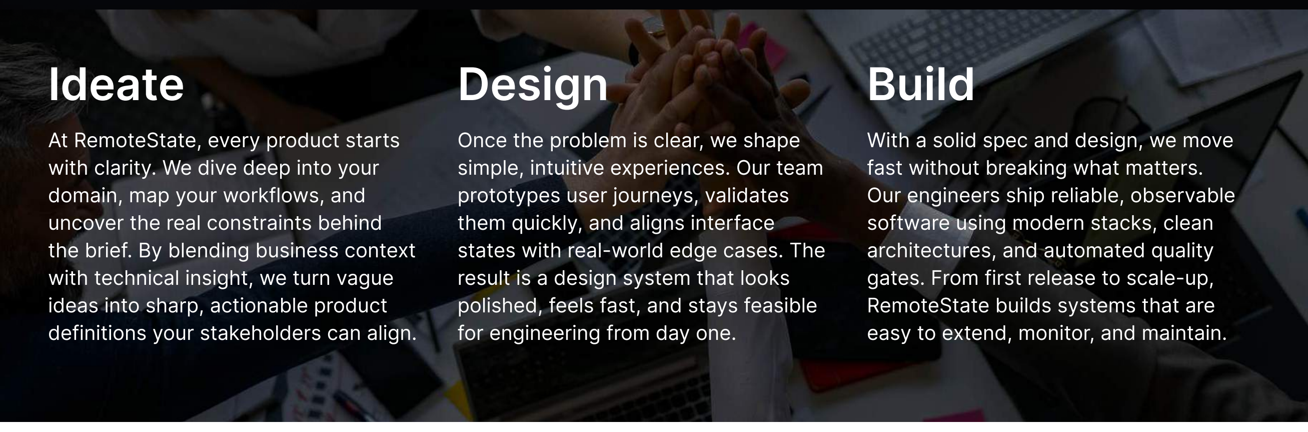
Innovation Squad

A skilled team of developers, architects, and strategists who build solutions that scale, perform, and deliver measurable results.

RemoteState

How We Work

RemoteState is a technology partner focused on turning ambitious ideas into reliable products through modern web, mobile, and cloud engineering. Teams blend product thinking with proven practices to deliver secure, scalable solutions and measurable outcomes for startups and global enterprises.



Ideate

At RemoteState, every product starts with clarity. We dive deep into your domain, map your workflows, and uncover the real constraints behind the brief. By blending business context with technical insight, we turn vague ideas into sharp, actionable product definitions your stakeholders can align.

Design

Once the problem is clear, we shape simple, intuitive experiences. Our team prototypes user journeys, validates them quickly, and aligns interface states with real-world edge cases. The result is a design system that looks polished, feels fast, and stays feasible for engineering from day one.

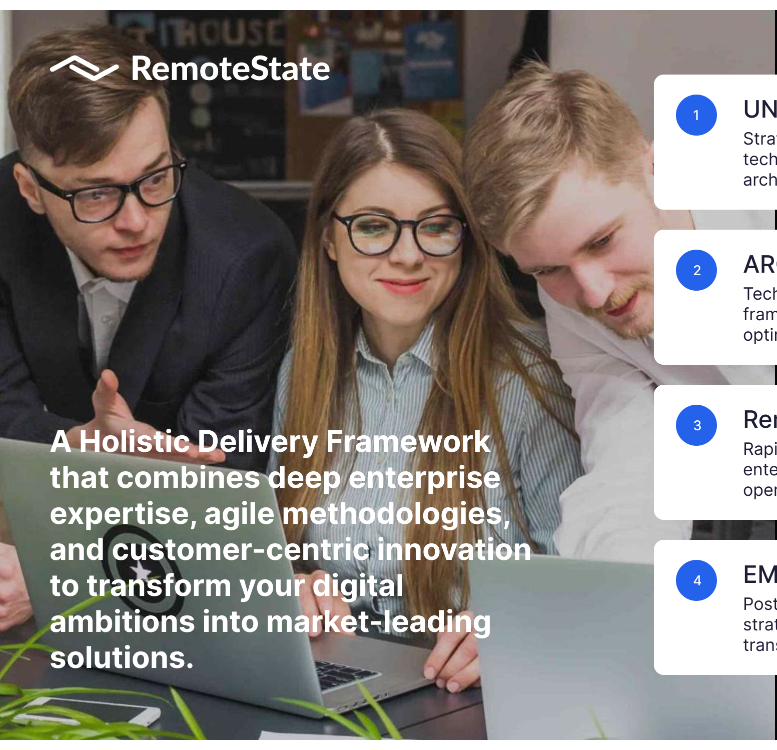
Build

With a solid spec and design, we move fast without breaking what matters. Our engineers ship reliable, observable software using modern stacks, clean architectures, and automated quality gates. From first release to scale-up, RemoteState builds systems that are easy to extend, monitor, and maintain.

RemoteState

A Passionate Leader in Futuristic Solutions Development

From strategic consulting to full-cycle development and support, engagement models are flexible and collaborative - designed to ship faster, scale confidently, and consistently exceed expectations.



RemoteState

A Holistic Delivery Framework that combines deep enterprise expertise, agile methodologies, and customer-centric innovation to transform your digital ambitions into market-leading solutions.

1. UNDERSTAND YOUR VISION
Strategic consultation, business requirements mapping & technology roadmap planning for sustainable enterprise architecture

2. ARCHITECT THE SOLUTION
Technical design, system infrastructure & scalable framework creation with security and performance optimization

3. RemoteState's MODEL
Rapid development cycles, cloud deployment & enterprise-grade integration ensuring seamless operational excellence

4. EMPOWER & EVOLVE
Post-launch support, continuous optimization & strategic scaling as your business grows and transforms

PepsiCo

PepsiCo

PepsiCo, a global powerhouse with $91 billion in annual revenue, faced a critical bottleneck in its massive distribution network. Distributors and sales representatives struggled to bridge the gap between catalog equipment and the physical reality of a customer's space. To solve this, we developed a mobile-first, AR-powered solution designed to bring precision to the sales process.

For Corporates
For Farmers
Circonomy

Circonomy

Circonomy

Circonomy was created to drive sustainability in agriculture by helping farmers and artisans convert waste biomass into valuable biochar, track carbon sequestration, and participate in transparent carbon credit markets. Mobile apps enable tracking of crop progress via geo-tagged photographs, streamlined biochar production for both farm and artisan operations, and real-time inventory and distribution management.

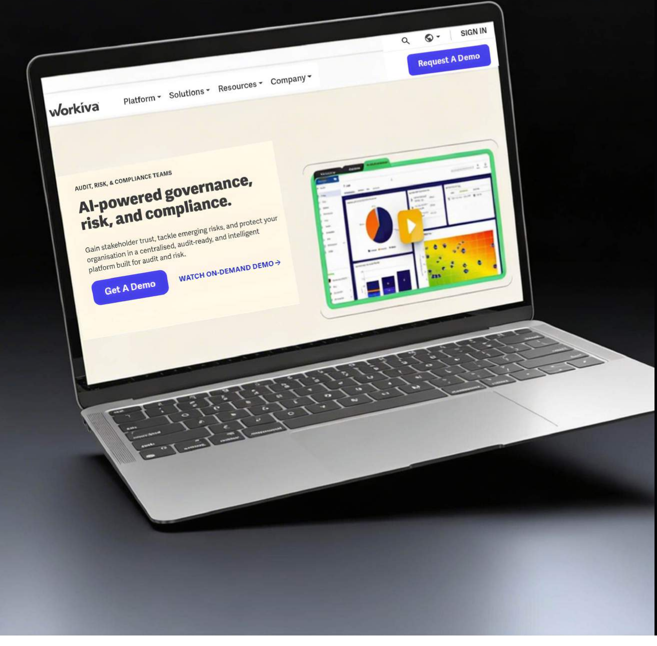
FITPASS®

Fitpass

Fitpass aimed to simplify access to fitness across India by offering a single subscription that unlocked thousands of gyms, studios, and wellness experiences. As the platform scaled to millions of users and corporate clients, the need for a modern, scalable backend became critical. The engagement focused on strengthening core architecture and improving subscription flexibility.

Golang React

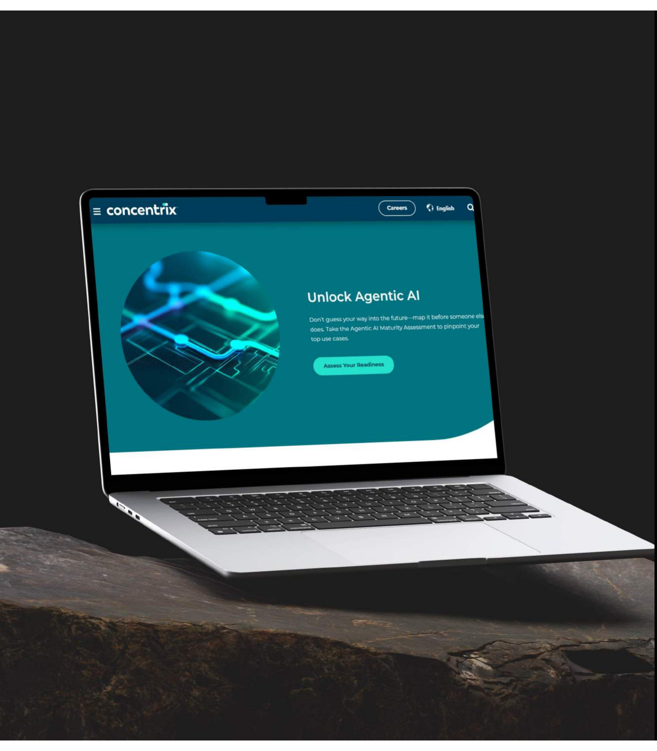


workiva
AI-powered governance, risk, and compliance.
Get A Demo

Workiva

Workiva delivers an integrated, cloud-based reporting platform relied upon by the world's largest enterprises to handle financial, risk, and compliance reporting. In this project, RemoteState contributed to a major service migration and API infrastructure overhaul, modernizing the core of Workiva's messaging, scheduling, and notification stacks.

Java Golang React

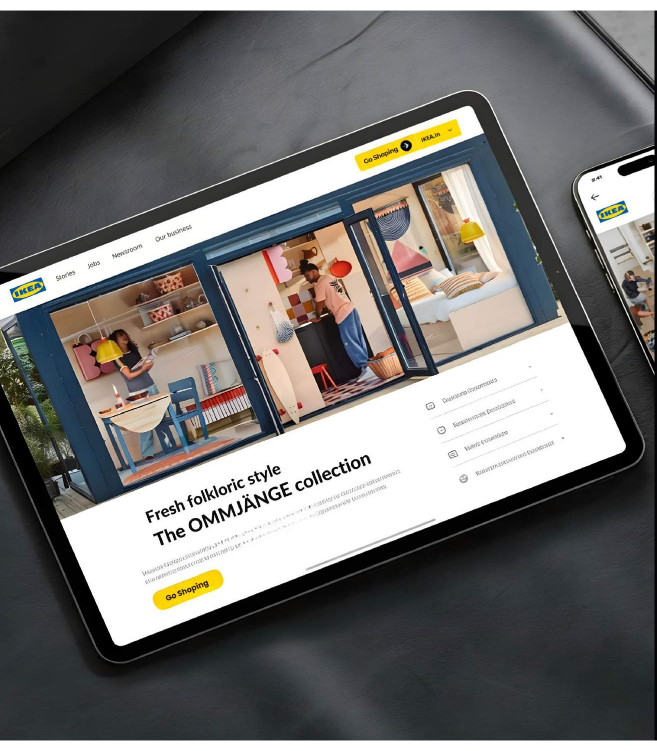


concentrix
Unlock Agentic AI

Concentrix

Concentrix faced challenges coordinating corporate transportation for thousands of employees working across rotating shifts and campuses. The CNX Shuttle app provided a mobile-first experience: employees could reserve seats, track shuttle positions live, and receive automated notifications about their schedule or last-minute changes.

Java Android

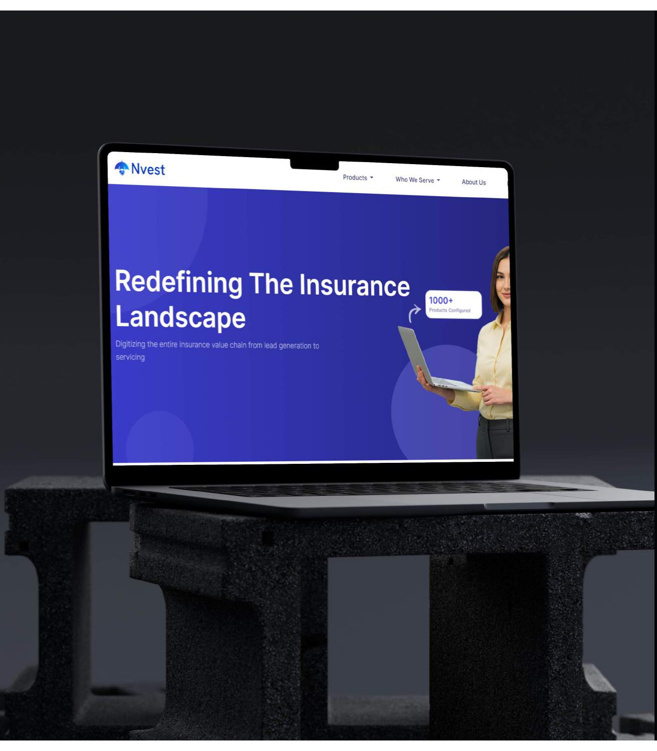


IKEA
Fresh folkloric style
The OMMJÄNGE collection
Go Shopping

IKEA

Ikea required a solution to automate and centralize governance across thousands of digital systems worldwide. The Metal Model platform was engineered to assess business criticality, data sensitivity, privacy risk, and compliance requirements for every IT system, classifying assets by risk categories (Platinum/Gold/Silver/Bronze).

NodeJs React

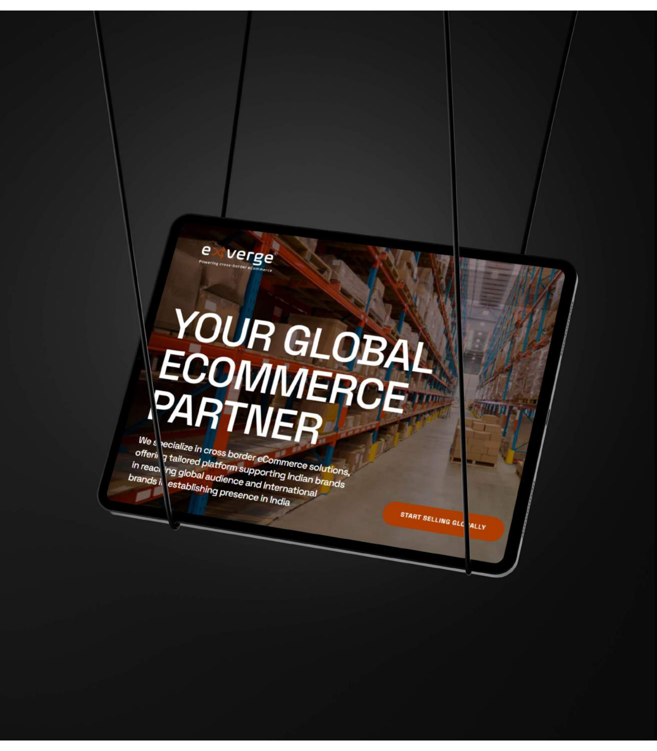


Nvest
Redefining The Insurance Landscape

Nvest

Nvest began as a mission-driven initiative to close the financial literacy gap for new and aspiring investors. The platform blends structured learning modules with gamified quizzes and portfolio simulations, helping users build core investment skills at their own pace. Nvest leverages real-time analytics and personalized content delivery to keep learners engaged, using AI to adjust the curriculum to each user's needs and experience.

NodeJs React

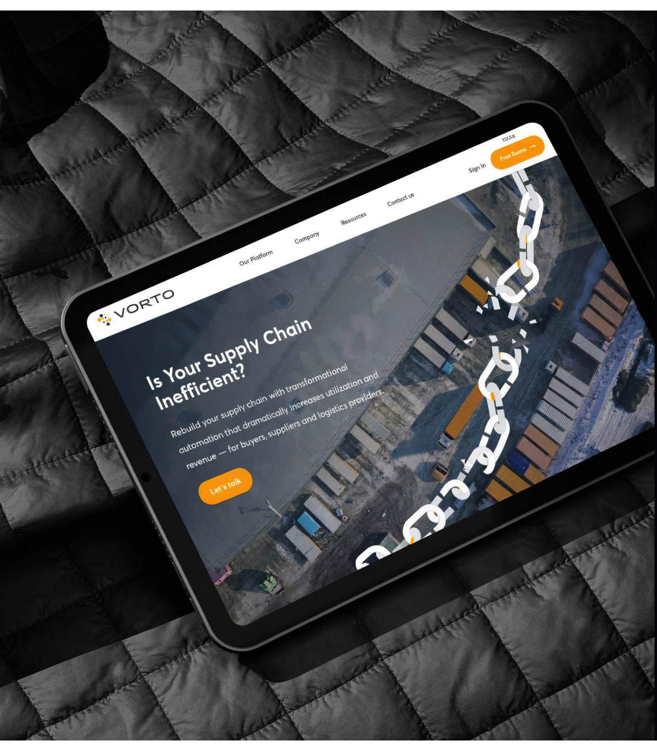


exverge
YOUR GLOBAL ECOMMERCE PARTNER

Exverge

Exverge was founded to reinvent warehouse management, tackling the limitations of legacy platforms and manual inventory workflows. The product vision focused on driving greater visibility, accuracy, and speed in order tracking, dock management, and fulfillment tasks.By simulating warehouse layouts, automating inbound and outbound order creation.

Postgresql Angular Golang



VORTO
Is Your Supply Chain Inefficient?

Vorto

Together sought to remove friction from patients' medication management journeys by automating prescription tracking, clinical reminder scheduling, and refill logic. The goal was to create a platform where users could effortlessly receive timely reminders, refill prompts, and test notifications without worrying about complex pharmacy processes or missing doses.

iOS Android Kubernetes Postgresql Angular Golang React

UIUX DesignerHub

UIUX DesignerHub was envisioned to be the ultimate online destination for creative professionals seeking inspiration, connection, and professional growth. The platform provides designers with tools to build beautiful, personalized profiles, display their projects.

Athena
Athena MCQ Platform

Athena

Athena was built to simplify and professionalize the administration of online examinations for both educational institutions and hiring organizations. The platform streamlines everything from candidate onboarding to exam scheduling, delivery, and result computation.

NodeJs React

Beyond Scribing:
A Unified Multi-Agent AI Platform for Value-Based Care

IntelliTek.ai

Intellitek Health

Intellitek Health was built to transform clinical documentation and workflow management for doctors by harnessing AI and voice technology. The platform serves as a clinical virtual assistant, enabling medical professionals to dictate, chart, prescribe, and navigate patient records hands-free, reducing manual data entry and administrative overhead.

NodeJs Python

FEED
CONCORD

Concord

Concord

Concord was conceived as a digital sanctuary, designed to empower people to find genuine connections and express themselves freely within vibrant online communities. Its purpose is to bring together friends and interest groups in themed "bubbles" - each with their own rules, vibes, and moderation. Community members enjoy creative communication features, curated live events, badges, and social collectibles that foster loyalty and group identity.

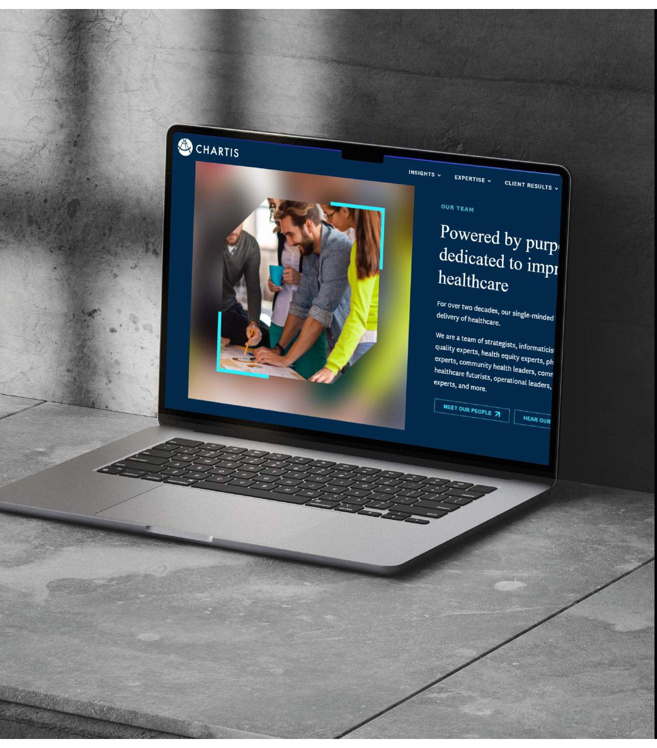
AMERICAN EXPRESS

American Express-Reparo

Reparo was developed as a critical enterprise system to help American Express efficiently address and remediate customer account anomalies. When the proprietary Shield engine detects issues affecting points, benefits, or other account entitlements, Reparo provides a single, streamlined UI for both automated and manual investigation.

Kubernetes Postgresql React React Native



CHARTIS

Chartis

Chartis sought to modernize and unify the way US healthcare institutions conduct and document both quality-focused surveys and background reviews. The platform supports a full hierarchy: institutions, hospitals, multiple assessments, findings, and observations. Each level enables chat - empowering survey leads and reviewers to discuss and resolve issues instantly.

Angular NodeJs

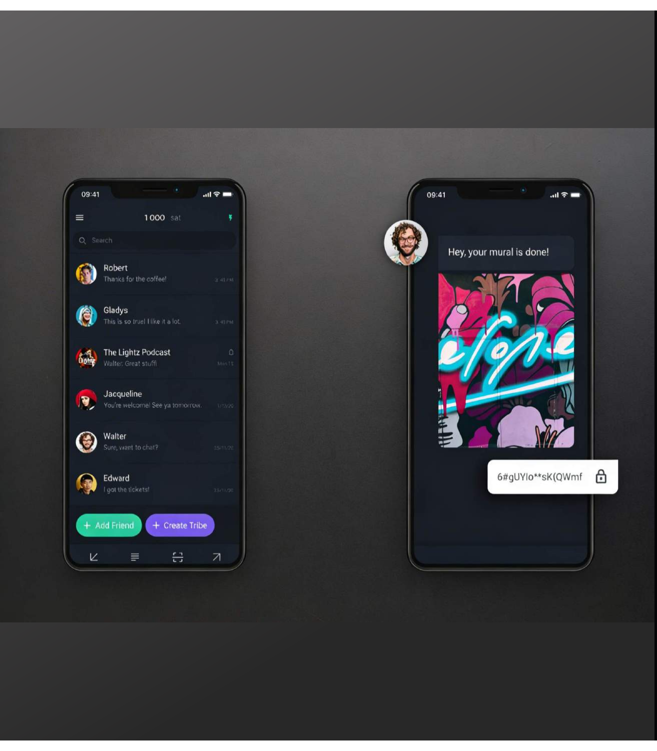
kissht

Kissht

Kissht set a new standard for retail lending by enabling instant EMI offers and approvals at the point of sale in stores across India. The platform digitizes the entire loan journey - from customer eligibility and KYC, to plan selection and automated repayment. Retailers and vendors use the integrated dashboard to initiate loan applications, track status, and manage sales, while customers experience quick, paperless onboarding and live EMI selection.

Java Angular Golang



Hey, your mural is done!

SPHINX

Sphinx Chat

Sphinx Chat was developed to deliver a robust real-time messaging platform capable of supporting diverse communities and enterprises. With a focus on security and scalability, the platform supports encrypted messaging, media sharing, and threaded conversations across multiple channels. Its modular backend enables horizontal scaling to meet growing user base demands. Advanced permission controls ensure proper access management.

Android Rust Postgresql Kotlin
